Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a method of fabricating an optoelectronic component, classified in class 427, subclass 58.
- II. Claims 19 and 20, drawn to an optoelectronic component, classification dependent upon the specific optoelectronic component. For example, an organic electroluminescent device is classified in class 313, subclass 504, while an organic solar cell is classified in class 136, subclass 263. Claims 19 and 20 are generic for these two as well as other types of optoelectronic components.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by a materially different process such as by forming the at least one organic optoelectronically active layer by ink-jet printing or any of the alternative processes discussed in paragraph [0003] of the present specification. (A product defined by the process by which it can be made is still a product claim and can be restricted from the process if the product as claimed can be made by another materially different process.)

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, and the

Art Unit: 1774

inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
